

The natural trajectory from landscape architecture to urban health political science university

For a young woman who was angry with the world but didn't really know what she was angry with to a professor and director at UNSW may not look like a natural trek. Evelyne will walk you through her existential doubts, the discovery of a focus for her anger, circumstantial but serendipitous meetings with people and institutions she thought she admired, more existential doubts, and an excursion into the Kokytos of medical education. She will hope to show that her mission to establish a more legitimate place for political science in the health world is starting to pay off.

About Professor Evelyne de Leeuw

Director, Centre for Health Equity Training Research and Evaluation (CHETRE),
Director, Healthy Urban Environments (HUE) Collaboratory, UNSW Sydney

Evelyne de Leeuw joined CHETRE in September, 2015, and is based at the interface of health research, policy and practice at UNSW Sydney, the South Western Sydney Local Health District/Population Health, and the Ingham Institute.

Professor de Leeuw holds a Masters in Health Policy and Administration (University of Maastricht, The Netherlands, 1985), MPH at the University of California at Berkeley in comparative health systems research (1986) and a PhD in health political science (Maastricht, 1989).

Venue: Seminar is available by [Teams Meeting Link](#)

Enquiries: Ravit Danieli-Vlandis ravit@unsw.edu.au

Recorded Seminars are available on the [SPHCM website](#)

Organisation: Seminars are organised by Professor Robyn Richmond. Research student seminars are organised by Poshan Thapa School of Population Health (formerly School of Public Health and Community Medicine), Faculty of Medicine, UNSW Sydney, NSW 2052, Australia | Tel: +61 (2) 9385 2517 | Web: sphcm.med.unsw.edu.au | CRICOS Provider Code 00098G

UNSW
SYDNEY

Since its initiation in 1986, she has been active in the international Healthy Cities movement. From 1992 to 2001 she held the position of Director of the World Health Organization Collaborating Centre for Research on Healthy Cities at the University of Maastricht. She assists WHO regionally and globally in Healthy City evaluation reporting, most recently in special issues of *Health Promotion International* and the *Journal of Urban Health*. She is known for her strong engagement with local health policies and politics and is a welcome speaker at both community and research events.

Professor De Leeuw has a reputation in building public health curricula in tertiary education around the world, establishing Schools of Public Health in The Netherlands, Denmark, advising such endeavours in Kazakhstan, Estonia and El Salvador, and negotiating a world class public health programme in the Medical School at Deakin University (Geelong, Australia).

She has been involved in WHO health promotion endeavours since the 1986 Ottawa Conference and attended all subsequent international health promotion conferences; at the fourth one (Jakarta, 1997) and eight one (Helsinki, 2013) she acted as conference rapporteur.

Evelyne currently holds appointments as Honorary Professor, Deakin University and La Trobe University; Visiting Professor, Université de Montréal; and Visiting Professor, Maastricht University (The Netherlands). She is WHO European Research Director for Healthy Cities.

Evelyne is Editor-in-Chief of the international peer-reviewed journal *Health Promotion International* and considered a leading global health promotion scholar, as evidenced by her appointments to high-level research panels (e.g., the Academy of Finland, and Science Ministries in Japan and Germany).

She has published several books (notably on Healthy Cities with WHO, and Springer; on policy approaches to health promotion with *Oxford University Press*; on consumer health democratisation with *Edward Elgar*) and over 100 peer-reviewed articles, plus several dozen book chapters. Her scholarship and writing focus on (1) methodologies for complex local health evaluations; (2) policy and governance for health innovation at the local level; and (3) action at the nexus between research, policy and practice.

In the latter area, her conceptual framework ('nexus theories') is used by health and medical research councils in The Netherlands, Germany and Canada to frame and assess calls for research proposals.

Though based in Australia with an admittedly Oceanic/Pacific 'service area', Professor De Leeuw happily considers the world her oyster.
